*1 The specified foundation sizes represent minimum measurements based on empirical values required to erect a structurally stable, safe and permanent fence line in wind zone 1

This is based on the assumption that the ground below the top layer is of soil class 3-4 according to DIN 18300 VOB/C and ensures, among other things, a permanent and structurally stable fence installation.

The foundations do however not correspond to static calculations.

Project-specific static analyses can be issued on request.
